

Be able to manufacture precision parts by sand mold casting is their strength

Main Services

Forging of stainless-steel and copper alloy products

Main Clients

Manufacturers of pumps and valves

Main Products

Parts for pumps (impellers), wooden molds for processing railway vehicle bodies

Company overview

Address / 3-17 Takasago, Takaishi city, Osaka 592-0001

Tel / +81-72-268-0035 Fax / +81-72-268-0037

Sand mold casting of stainless-steel parts

Sand mold casting of complex shaped precision stainless-steel parts

Business outline

Supply impellers to major pump manufacturers

YANAGIMOTO Co., Ltd. is a manufacturer of sand mold casting of stainless-steel parts. They're great at manufacturing precision parts by using core cylinder which form hollow parts placing in mold and handling lots of impellers of pumps which has 3D complex shape. They founded in 1954, then started manufacturing stainless-steel casts. They are especially receiving orders of supplying products from major pump manufacturers last five years which they never dealt with before. The president Yoshimitsu Yanagimoto looks back as "We succeeded to deliver very high precision products after many attempts 7 years ago. It became successful experience and made our employees highly motivated then leads to business development."

Impeller which is important parts of pumps

Strength

Increase added value by in-house integrated production structure

They have in-house integrated production structure from manufacturing wooden products' model which is the base of molds to finishing and polishing after casting. This is unusual for casting manufacturers in Japan, and this is their strength. Equipping various processing machines such general purpose lathe, NC lathe, machining center and wire-electrical discharge machine from about 10 years ago to keep adding

value of products, thus, it led to expanding their business in the recent years. Originally, wooden pattern department was their subcontractor. YANAGIMOTO Co., Ltd. acquired to success the capital and employees and achieve insourcing wooden pattern manufacturing. They also keep dealing with manufacturing life-sized wooden pattern which is used for body processing of leading cars of train for rail vehicles which they've been dealing since before the acquisition.

New Business

Challenge to develop camping gear

They plan to join an exhibition in Europe first time in 2023 to aim to start business with major foreign pump manufacturers. Also, they focus on developing to domestic new fields such receiving orders of parts for small hydro-electric power equipment which used such agricultural water. The president Yanagimoto speaks, "We try developing general consumers products such producing trial of cooking pots for camping, made by casting." In autumn in 2022, they installed 3D printer, then started to effort on processing in lieu of wooden pattern and use it to develop to new fields such art casting products and art pieces. Enlarge the virtuous cycle which was created by one successful experience and their challenge continues to develop their company and employees.

Parts for small hydro-electric power equipment

Greeting from President

We keep in mind to build corporate culture which our employees get interested in first. Also, we challenge new things based on thought of "taking responsibility of supplying" as a manufacturer. We hope to be a company which can keep such "down-to-earth challenge".

President Yoshimitsu Yanagimoto
