

Yamakin Co., LTD.

Their laser combined machine which can be said as cardiac region

Main Services

Precision sheet metal working, general metal works, laser engraving

Main Clients

Stadiums and house floor of institutions, manufacturers of electronic parts and finishing hardware

Main Products

Custom parts such video equipment, electronic machinery sheet metal parts etc.

Precision metal plating working, laser engraving etc.

Receiving orders of precision sheet metal working from various industries

Strength

Laser combined machine became their strength

Their strength is the latest metal working facilities. They installed laser combined machine which enable precision processing such cutting and drilling with one machine formed around the belief that "Great offers come by installing great machines.". It's expensive machine but they could achieve decreasing running cost from speeding up processing and labor saving by installing this machine

drastically. Employees who process at the site is the elite unit but the director Shimamura talks "All of them have skill of designing by CAD to welding and other processing technology.". This is the result from focusing on employees' development to let them join workshop as company expense. One employee takes care one client including negotiation integrated. From the capability of receiving orders integrated from measurement to design and manufacturing just from image information from clients, and it leads to obtaining their trust.
