

Their original product "DOKURITSU SENGEN" series

### Main Services

Commissioned development and manufacturing of products with action, manufacturing, and sale of Electric Lifting Chair

### Main Clients

Renting wholesale nursing equipment, manufacturers of medical, nursing, and optical equipment etc.

### Main Products

Electric Lifting Chair, Ophthalmic Electric Tables, various ramps, rehabilitation equipment etc.

## Manufacturing and sale of lifting related equipment

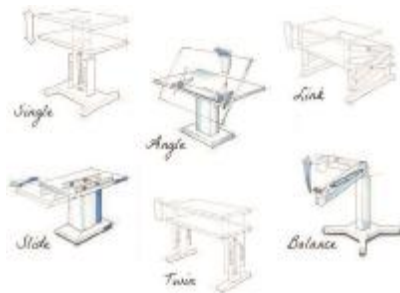

# Develop with OEM utilizing sliding technology and in-house Electric Lifting Chair

### Business outline

## 60 years of sliding mechanism technology by skill transfer from the founder

KOMURA CORPORATION handle ODM and OEM (producing clients' brands' products/Design and production) which applied unique sliding mechanism (lifting, sliding, adjust angles and balancing to stop at arbitrary position) to wide range of products. Main products are Ophthalmic Electric Tables for ophthalmology and various rehabilitation equipment. As their in-house brand, they manufacturer their main products, Electric Lifting Chair "DOKURITSU SENGEN" series which they released in 1993. Their manufacturing, that they design and develop from parts to assemble finished good in-house, is inherited from the founder Mr. Seiichi Komura who is the grandfather of the current president. Also, sliding mechanism technology for drawing tables, which they produce in OEM since the foundation, is improved by long-time improvement and the technology is applied to the products such medical nursing fields.

Their core technology, sliding mechanism

### Strength

## Ability to make proposal from scratch

Achievement and know-how that apply sliding mechanism technology, which is inherited since the foundation, to medical and nursing fields such Ophthalmic Electric Tables and Electric Lifting Chair is their strength. "We can make a proposal for sliding mechanism from scratch for depending on products." The president Taisuke Komura says proudly. For example, they got a hint from

gas springs of vehicles for balancing part for the mechanism. For the products which loads are stable and manual, they adopt gas springs and adopt electric for the products which fluctuate loads. There are 3 assembly lines at production sites and assemble 60 to 70 kinds of products every month. In addition, they installed such thermos-hygrostat, 3D scanner and CMM, and focus on quick inspection in-house at development level and quality control after mass production.

### In-house products

## Aim 30% of in-house products ratio

"DOKURITSU SENGEN" series support safe and secure standing and sitting of elderly and physically handicapped persons by vertical motion with just operating levers. It gained publicity by enforcement of Long-Term Care Insurance Act in 2000, and they expand their products such "SMART" which is compact and "MOVE" which is mobile to meet their clients' requests and demands. In 2023, the products marks 30th anniversary, and planning to release new product. "Standing and sitting are necessary movement in daily life, and we want to supply safe and secure standing and sitting by using "DOKURITSU SENGEN" for supporting required people for the point of view of nursing prevention." With the thought in his mind, the president Komura is enthusiastic as "we want to improve 30% of in-house brand" .

Dealing with assembling wide range of products is one of their strengths

### Greeting from President

We deal with integrated manufacturing from designing and development to mass-production for the clients' demands of "Can you make products which can move like this?". We go forward to develop under the corporate identity of "continue work to create smile to achieve genuine riches." and "develop through communication and challenging."

President **Taisuke Komura**
