Foundation / Apr 1918 Establishment / Aug 1941

Capital / JPY 100 million Employees / 171

Developing, manufacturing and sale of chemicals

Overwhelming strength with chemicals such tartaric acids and citric acids

Strength

Manufacture necessary things only with only necessary amount when needed

The company's strength is its ability to produce quality products that meet customer needs, despite its industrial production. For example, even for citric acid products, customers have a wide variety of quality and packaging requirements, and the company is able to meet them in detail through domestic production. Even for tartaric acid, we can supply extremely low-concentration

products to customers who are troubled by overseas products with high sulfur levels. We will continue to produce general-purpose products that can be used in niche applications. The accumulation of such products is our strength. In order to build on this, not only the front line, but all executives and employees must continue to faithfully respond to customer feedback. President Ogura explains the secret of creating a workplace: "We devised to create a list of our products, and where they can be found in the final stage of the manufactured product and show it to our employees to boost their morale."
