

Seiwa Co., Ltd.

In-house developed product, "KS Air Friction Shaft"

Main Services

Processing metal and sale of "KS Air Friction Shaft"

Main Clients

Manufacturers of automotive, chemistry, paper and film. Trading companies

Main Products

High pressure cylinder related parts, pulverulent body parts and "KS Air Friction Shaft"

Metal processing, proprietary product (winding shaft)

Producing high performance shafts with cultivated technology by metal processing

Strength

Meet clients' needs with drawing on metal processing experience

Cultivated technology from dealing with difficult-to-process as metal processor and experience of cooperating with cooperative enterprises is utilized for developing their products. Their unique products of winding shaft names "KS Air Friction Shaft" obtained patent and utility model patent, and it has capability of

high efficiency winding like sticky materials such sheets of paper diapers and topical anti-inflammatory analgesics. And it also hardly leaves marks on ultra-thin and soft materials such films for automotive batteries and metal foils. They deal with a wide variety of tube sizes for winding in millimeters. As their products are tubeless, it is easy to disassemble in failure and just need to change the failure components. As a result, workability increases as it is easy to maintain.
