

# Kansai Centrifugal Separator MFG. Co., LTD.

Centrifugal separator for producing blood derivative

## Main Services

Manufacturing and sale of centrifugal separators

## Main Clients

Manufacturers of pharmaceutical, chemical and food, universities

## Main Products

Centrifugal separators for production

## Company overview

Address / 1-8-8 Sagisu, Fukushima-ku, Osaka 553-0002

Tel / +81-6-6458-8101 Fax / +81-6-6454-0181

Foundation / Mar 1918 Establishment / Dec 1952

Capital / JPY 20 million Employees / 19

Manufacturing and sale of centrifugal separators for production

## Integrated production of centrifugal separator depends on clients' demand

### Product improvement

### Focus on automation of devices and improvement of reliability

They screen material carefully and process the parts thick as needed to maintain the strength, their products have very high durability. Therefore, there are clients which used the same centrifugal separator for over 60 years. President Katsumi says, supplying parts for repairs and maintenance, "We can supply them semi-permanently

as we products them within our company." and they're planning to strengthen maintenance system more. To let their products handling materials such fine particles and protein which is difficult to separate by conventional equipment, they developed ultrahigh speed centrifugal separator which enhanced its centrifugal effect to 40,000 times of 1G for the production as the first company in Japan. From now on, they focus on developing to automate take off operation of solids after separation.
